ELSEVIER

Energy and Buildings 21 (1994) 269–271

ENERGY AND BUILDINGS

Subject Index of Volume 21

Air cells
the effect of air cells and mortar joints on the thermal resistance of concrete masonry walls, 111
Air–earth exchanger
air–earth exchanger study in real site experimentation and simulation, 155
Ambient temperature
on the variability of cooling degree-days in an urban environment: application to Athens, Greece, 93
ASHRAE
thermal performance of three deep basements: a comparison of measurements with ASHRAE Fundamentals and the Mitalas method, the European Standard and the two-dimensional FEM program, 23
Attics
ventilating attics to minimize icings at eaves, 229

Baffles
discussion on surface condensation in free convection cooling baffles, 245
Basement
thermal performance of three deep basements: a comparison of measurements with ASHRAE Fundamentals and the Mitalas method, the European Standard and the two-dimensional FEM program, 23
Building design
a first-order thermal model for building design, 133
Building energy data
using synthetic data to evaluate multiple regression and principal component analyses for statistical modeling of daily building energy consumption, 35
Building envelope
the effect of air cells and mortar joints on the thermal resistance of concrete masonry walls, 111
Buildings
computer simulation of wind speed, wind pressure and snow accumulation around buildings (SNOW-SIM), 235
Building variation
variation of energy consumption in dwellings due to climate, building and inhabitants, 209

Calibration
two-to-one discrepancy between measured and predicted performance of a 'low-energy' office building: insights from a reconciliation based on the DOE-2 model, 121
Climate
variation of energy consumption in dwellings due to climate, building and inhabitants, 209
Cold climate
heating energy reduction of buildings in cold climates, 219
Cold temperature boundary
thermal performance and hysteresis in fibrous insulation exposed to moisture and step changes in the cold temperature boundary condition, 251
Commercial buildings
influence of transmission models for special glazing on the predicted performance of commercial buildings, 101
Computer simulation
computer simulation of wind speed, wind pressure and snow accumulation around buildings (SNOW-SIM), 235
Concrete masonry walls
the effect of air cells and mortar joints on the thermal resistance of concrete masonry walls, 111
Condensation
discussion on surface condensation in free convection cooling baffles, 245
a knowledge-based system for condensation diagnostics in houses, 259
Convection
discussion on surface condensation in free convection cooling baffles, 245
Cooling
discussion on surface condensation in free convection cooling baffles, 245
Cooling degree-days
on the variability of cooling degree-days in an urban environment: application to Athens, Greece, 93

Domestic dwellings
a geometrical model of dwellings for use in simple energy calculations, 83
Dwelling
air–earth exchanger study in real site experimentation and simulation, 155

Energy advice
a geometrical model of dwellings for use in simple energy calculations, 83
Energy conservation
comfort control for short-term occupancy, 1
Energy consumption
comfort control for short-term occupancy, 1
two-to-one discrepancy between measured and predicted performance of a 'low-energy' office building: insights from a reconciliation based on the DOE-2 model, 121
variation of energy consumption in dwellings due to climate, building and inhabitants, 209
Energy efficiency
low-energy buildings, 169
Energy-efficient design
thermal performance of two technically similar super-insulated residences located at 61°N and 41°N latitude, 199
Energy modelling
a geometrical model of dwellings for use in simple energy calculations, 83
Energy savings
energy-efficient retrofitting of office buildings, 175
heating energy reduction of buildings in cold climates, 219

Elsevier Science S.A.

Energy simulation
symbolic modeling in building energy simulation, 147
European standard
thermal performance of three deep basements: a comparison of measurements with ASHRAE Fundamentals and the Mitalas method, the European Standard and the two-dimensional FEM program, 23
Evaporative cooler
performance of an indirect evaporative cooler in Athens, 55

Finite element method
thermal performance of three deep basements: a comparison of measurements with ASHRAE Fundamentals and the Mitalas method, the European Standard and the two-dimensional FEM program, 23
Fundamentals
thermal performance of three deep basements: a comparison of measurements with ASHRAE Fundamentals and the Mitalas method, the European Standard and the two-dimensional FEM program, 23

Glazing systems
influence of transmission models for special glazing on the predicted performance of commercial buildings, 101

Heat exchange
study on heat exchanged in soil by circulating water in a steel pile, 65
Heat exchanger
performance of an indirect evaporative cooler in Athens, 55
Heat flow sensors
the effect of air cells and mortar joints on the thermal resistance of concrete masonry walls, 111
Heating energy consumption
low-energy residential housing, 187
Heating energy reduction
heating energy reduction of buildings in cold climates, 219
Heat sink
study on heat exchanged in soil by circulating water in a steel pile, 65
Heat source
study on heat exchanged in soil by circulating water in a steel pile, 65
Hotels
comfort control for short-term occupancy, 1
Houses
a knowledge-based system for condensation diagnostics in houses, 259
HVAC controls
two-to-one discrepancy between measured and predicted performance of a 'low-energy' office building: insights from a reconciliation based on the DOE-2 model, 121
Hysteresis
thermal performance and hysteresis in fibrous insulation exposed to moisture and step changes in the cold temperature boundary condition, 251

Icing
ventilating attics to minimize icings at eaves, 229
IEA solar programme
low-energy residential housing, 187
Inhabitant behaviour
variation of energy consumption in dwellings due to climate, building and inhabitants, 209
Insulation
thermal performance of two technically similar super-insulated residences located at 61°N and 41°N latitude, 199
thermal performance and hysteresis in fibrous insulation exposed to moisture and step changes in the cold temperature boundary condition, 251

Knowledge-based system
a knowledge-based system for condensation diagnostics in houses, 259

Low-energy buildings
low-energy buildings, 169
Low-energy housing
low-energy residential housing, 187

Mitalas method
thermal performance of three deep basements: a comparison of measurements with ASHRAE Fundamentals and the Mitalas method, the European Standard and the two-dimensional FEM program, 23
Mortar joints
the effect of air cells and mortar joints on the thermal resistance of concrete masonry walls, 111
Multiple regression modeling
using synthetic data to evaluate multiple regression and principal component analyses for statistical modeling of daily building energy consumption, 35

Night ventilation
performance of an indirect evaporative cooler in Athens, 55

Occupant behavior
two-to-one discrepancy between measured and predicted performance of a 'low-energy' office building: insights from a reconciliation based on the DOE-2 model, 121
Office buildings
two-to-one discrepancy between measured and predicted performance of a 'low-energy' office building: insights from a reconciliation based on the DOE-2 model, 121
energy-efficient retrofitting of office buildings, 175

Predicted mean thermal sensation vote (PMV)
a comparison of the predicted and reported thermal sensation vote in homes during winter and summer, 45
Preheating fresh air
air–earth exchanger study in real site experimentation and simulation, 155
Principal component analysis
using synthetic data to evaluate multiple regression and principal component analyses for statistical modeling of daily building energy consumption, 35

Radon
impact of subslab ventilation technique on residential ventilation rate and energy costs, 15
Refreshing air
air–earth exchanger study in real site experimentation and simulation, 155
Retrofitting measures
energy-efficient retrofitting of office buildings, 175
Roofs
ventilating attics to minimize icings at eaves, 229

Snow accumulation
computer simulation of wind speed, wind pressure and snow accumulation around buildings (SNOW-SIM), 235

SNOW-SIM
computer simulation of wind speed, wind pressure and snow accumulation around buildings (SNOW-SIM), 235
Soil
study on heat exchanged in soil by circulating water in a steel pile, 65
Solar house
low-energy residential housing, 187
Subslab depressurization system
impact of subslab ventilation technique on residential ventilation rate and energy costs, 15
Symbolic modeling
symbolic modeling in building energy simulation, 147

Thermal comfort
a comparison of the predicted and reported thermal sensation vote in homes during winter and summer, 45
comments on "Algorithms for the calculation of the view factors between human body and rectangular surfaces in parallelepiped environments", 79
Thermal model
a first-order thermal model for building design, 133
Thermal performance
thermal performance of three deep basements: a comparison of measurements with ASHRAE Fundamentals and the Mitalas method, the European Standard and the two-dimensional FEM program, 23
thermal performance of two technically similar super-insulated residences located at 61°N and 41°N latitude, 199
thermal performance and hysteresis in fibrous insulation exposed to moisture and step changes in the cold temperature boundary condition, 251
Thermal resistance
the effect of air cells and mortar joints on the thermal resistance of concrete masonry walls, 111
Thermal testing
the effect of air cells and mortar joints on the thermal resistance of concrete masonry walls, 111
Thermostats
comfort control for short-term occupancy, 1
Transmission models
influence of transmission models for special glazing on the predicted performance of commercial buildings, 101

Urban environment
on the variability of cooling degree-days in an urban environment: application to Athens, Greece, 93

Ventilation
impact of subslab ventilation technique on residential ventilation rate and energy costs, 15
ventilating attics to minimize icings at eaves, 229
View factors
comments on "Algorithms for the calculation of the view factors between human body and rectangular surfaces in parallelepiped environments", 79

Wall systems
heating energy reduction of buildings in cold climates, 219
Wind pressure
computer simulation of wind speed, wind pressure and snow accumulation around buildings (SNOW-SIM), 235
Wind speed
computer simulation of wind speed, wind pressure and snow accumulation around buildings (SNOW-SIM), 235
